
FrameMaker 11 commands

This list has been generated by a FrameScript from itl.

Notes

This report lists all commands available in the current FrameMaker environment (version & language) at runtime.

All modifications of the commands (via FM cfg file, CustomUI.cfg, script or plug-in) are shown.

The command sequence in this report corresponds to their initialization by FrameMaker. The group titles for the report are read from the corresponding comment lines of the FM-cfg files.

- First, those commands defined in the configuration file 'cmds.cfg' file are listed.
- Then the equation commands from the 'mathcmds.cfg' file are listed.

- In the configuration file 'wincmds.cfg' primarily platform-specific keyboard shortcuts are added to the commands that have already been initialized; a few new Windows-specific commands are, however, also defined.
- FrameMaker then subsequently initializes the command modifications of the configuration file 'CustomUI.cfg'
- At last those commands in this report that are defined by API clients (plug-ins) are listed. Among these are all FrameScripts that are installed.

The 'FC Hex' column renders FM command internal code into hexadecimal format. It corresponds to the specifications in the cfg files (x302) as well as the definitions in the fcodes.h file of the FDK (0x302).

Warning

Some of the commands are not working in the new interface which was introduced with FM-9. Among these are particularly:

- 18 Focus
- 18 Close Modeless Dialogs

Some commands do not work as listed, because their short cut is overloaded by API commands or the Enhanced Tool Bar.

Groups:

- 2 Main Window commands
